**Continued Examination Under 37 CFR 1.114**

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 05/13/2010 has been entered.

**Claim Objections**

2. Claim 52 is objected to because it should be a withdrawn claim since it depends upon a withdrawn claim 49. Appropriate correction is required.

**Claim Rejections - 35 USC § 102**

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 48 and 54 are rejected under 35 U.S.C. 102(b) as being anticipated by Wakamoto (JP Patent # 05-225933).

[Claim 48]

Wakamoto teaches an apparatus for forming and picking up an image comprising a frontal plane having an opening (window 1), the frontal plane (see figure 1) provided in a shield intercepting a propagation of waves of a first kind; an intermediate plane (microchannel plate 6) for capturing a first undistorted image (since no lens is involved there is no distortion) formed by the opening of the frontal plane and the waves of the first kind on a front surface of the intermediate plane, and

for converting the waves of the first kind to waves of a second kind on a rear surface of the intermediate plane (fluorescent screen converts the wave into visual waves); a secondary imaging system to project the waves of the second kind onto a surface; a two-dimensional image pick-up device (CCD 6) for picking up the image formed on the surface by the waves of the second kind; and a housing for integrating the opening frontal plane, the intermediate plane, and the two-dimensional image pick-up device (see figure 1).

[Claim 54]

Wakamoto teaches wherein the frontal plane having the opening intercepts the propagation of the waves of the first kind without the waves of the first kind passing through a lens (there is no lens as show in figure 1).

#### **Claim Rejections - 35 USC § 103**

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claim 50 is rejected under 35 U.S.C. 103(a) as being unpatentable over Wakamoto (JP Patent # 05-225933).

[Claim 50]

Official Notice is taken that it is very well known to one skilled in the art to have the waves to be visible so that the user sees the waves making the system more user-friendly and efficient. Therefore taking the combined teachings of Wakamoto and Official Notice, it would be obvious to one skilled in the art at the time of the invention to have been motivated to have it is very well

known to one skilled in the art to have the waves to be visible so that the user sees the waves making the system more user-friendly and efficient.
